EXPERIENCE

- **Tata Consultancy Services Ltd.** Apr 2025 – Present
Software Engineer
Designed and implemented AI agents and GenAI proof-of-concepts using Python, LangChain, OpenAI APIs, and modern LLM frameworks. Built RAG pipelines incorporating document ingestion, chunking, embeddings, retrieval and response generation. Developed REST APIs and automated workflows that improved productivity and accelerated AI solution delivery across multiple business domains.
- **Path India Ltd.** Dec 2024 – Mar 2025
Associate Software Engineer
Developed and deployed full-stack applications and backend services using Python and modern web technologies. Built automation tools and APIs, migrated legacy applications to a scalable architecture, and collaborated across teams to improve operational efficiency and software maintainability.

EDUCATION

- **Bachelor of Computer Engineering** 2020–2024
Savitri Phule Pune University

SKILLS

- **Languages Frameworks** Python, Java, TypeScript, React, Node.js, Next.js,
- **GenAI LLM Stack** LangChain, LangGraph, OpenAI API, RAG, Prompt Engineering, AI Agents, Function Calling, Embeddings
- **Databases Search** Vector Databases, FAISS, ChromaDB, PostgreSQL, Hybrid Search
- **Backend Cloud** REST APIs, FastAPI, AWS, JSON, Git, GitHub
- **Software Practices** Object-Oriented Programming, Microservices, Agile, SDLC, CI/CD

PROJECTS

- **Enterprise Multi-Agent AI Orchestration Platform** Designed and developed AI agent workflows using LangChain and agent frameworks for multiple enterprise use cases in retail and business automation. Implemented tool calling, memory, structured outputs, and agent orchestration to automate complex multi-step workflows and improve operational efficiency.
- **RAG Knowledge Assistant with Hybrid Retrieval** Built Retrieval-Augmented Generation pipelines incorporating document ingestion, chunking, embeddings, semantic retrieval and response generation. Utilized LangChain, vector databases and contextual retrieval techniques to improve answer relevance and reduce hallucinations for enterprise knowledge discovery.
- **MCP-Based Design-to-Code Assistant using Figma** Implemented Model Context Protocol (MCP) server integrations with Figma to enable AI-assisted UI analysis and component generation. Leveraged Claude MCP capabilities for context sharing and tool interactions to accelerate development workflows.
- **AI-Powered Nifty Options Trading Assistant** Developed an LLM-driven trading assistant using Claude MCP and tool-calling capabilities to analyze market data and assist in Nifty options strategies. Integrated structured reasoning and external tools for decision support and workflow automation.

ACTIVITIES CERTIFICATIONS

- AI-900 Microsoft Azure AI Fundamentals.
- Solved 250+ problems on LeetCode, strengthening algorithmic thinking and problem-solving skills.
- Completed comprehensive Data Structures and Algorithms training from Apna College.
- Continuously exploring LangChain, LLM evaluation, vector search, AI agents and Retrieval-Augmented Generation systems through personal projects and experimentation.
